

**Blue Shark Power System announces a shift of its financial forecasts
on the results for the year 2018.**

Blue Shark Power System, listed on Euronext access, announces a delay 2018 turnover forecasts. Indeed, the contract in Djibouti requires a phase of on-site studies that will take place only at the beginning of the summer of 2019. This delay can be explained for administrative reasons on site and deployment of resources logistics at the expense of the Company's customers. Agreements signed are by no means challenged, so it's postponement in time only.

In 2018, the Company achieved the same turnover as the previous year to stay on course for the conquest of new markets.

About Blue Shark Power System Based in New Aquitaine, Blue Shark Power System designs and assembles tidal turbines with patented technological breakthroughs. The company offers two models, Blue Shark River for shallow waters and Blue Shark Marine for the seas and oceans. Its tidal turbines can produce up to 1000 kW / hour of electricity for greatly reduced installation and maintenance costs.

Blue Shark Power System intends to develop its equipment in partnership with energy operators around the world.
